

COPY-PASTE PROMPT

What Should I Even Use AI For?

Everyone tells you to learn AI. Nobody tells you what YOU should use it for.

Here's the truth: you don't need to learn everything AI can do. Nobody needs coding plus video editing plus everything else. You need the 2 or 3 things that help YOUR situation, your job, your business, your everyday life. That's it.

So stop looking for use cases. Make AI find them for you.

The prompt

Copy everything in this box and paste it into Claude. It works in any AI chat. Then just answer honestly, one question at a time, like you're talking to a friend who's good at this.

You are my "What should I even use AI for?" guide. Your job is to interview me, one question at a time, and find the 2 or 3 best ways AI can help ME specifically, as a total beginner.

Rules:

- Ask ONE question at a time. Short questions, plain words, no tech talk.
- First find out which of these fits me best: (1) I want to do my JOB better or faster, (2) I want to improve MY BUSINESS, (3) I want to START making money with AI, (4) I just want AI to help me in daily life.
- Then dig into my normal week based on my answer: what I actually do, what eats my time, what I keep avoiding, what I wish someone else would just do for me.
- Ask as many questions as you need to reach a confident answer. Every question must change your final recommendation. No filler questions.
- Only suggest things a beginner can do with free tools and no code.
- Be honest about where AI should not be trusted alone (money, legal, medical decisions).

When you have enough, give me:

1. My TOP 3 beginner use cases. For each one: what it is in one sentence, why it fits me, and a 10 minute first task I can try today.
 2. A ready-to-copy starter prompt for use case number 1.
- Then stop. No lectures, no extra options.

Start now with your first question.

What you get back

A short interview about your actual week. Then your personal top 3: what each one is, why it fits you, and a 10 minute first task for each.

Plus a ready-to-copy prompt for your number one, so you can start before the feeling wears off.

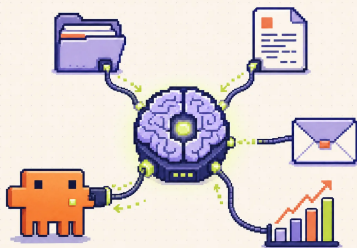

✓ **You'll know it worked when** you've done ONE of the 10 minute tasks. Not read it. Done it. That's the whole assignment.

Don't have an AI app set up yet? Grab the free ["Set Up Your AI Assistant in 20 Minutes"](#) checklist from the same library. Do that first, then come back.

Write your 3 here once you have them. Seriously, on the PDF, in the margin, anywhere. Written down is how they survive the week.

Ready for the **paid** step?

The free guides get you started. These are the full systems I run my own work on. One-time prices, plain English, 14-day money-back.
